

# Unilumin Sport CMS – User Workstation

User workstation with screen control/monitoring and content manager software is a part of Unilumin Sports CMS – an integrated control system for sports venues. It provides full control solution and allow an operator to instantly deliver multimedia to video displays, auxiliary displays, and marquees throughout the venue. User friendly control interface makes sending clips to displays as simple as clicking a button.

- Software has customizable workspaces to allow for different sports.
- Playlist options to control the order of the clips. Ability to store multiple clips in a single button for quick, one-click playback.
- Thumbnail preview to all for quick visual indication of the clip content. Containers to allow organization of multiple clips into one button or multiple buttons into one tab.
- Drag and drop real time data fields to allow for any layout of programmable sports data profiles.
- Statistic integration to allow entering live team and player statistics.
- Multiple transitions and effects.
- Inline text editing.
- System designed to control all the displays across arena from one workplace – scoreboards, ribbons, perimeters, cubes and even outdoor LED media displays – all can be controlled by one operator.

One-click control of all the arena displays. Playlist creation, on air update of dynamic content, media assets management – everything within one workplace. Powerful 3D template editor allows operator to have full control over the content creation.
